

Connections to Nature: Sensory Discovery

ECE-1st grade

People have five senses, so do animals--what a great connection! In class, we will talk about our senses and how to use them as our "tools" to make discoveries in nature. Our staff will set up several stations and after a brief introduction we will conduct small group activities. Our format is designed to keep young minds engaged while building anticipation for their field experience.

The trip to Bluff Lake is always thrilling for young students, for many of whom this is their first field trip. We understand that many parents want to share this experience with their little ones and we encourage parent participation.

While in their small groups at Bluff Lake, students will be encouraged to use their "tools". We will feel the plants, smell the flowers and listen for animal sounds. We will also use small, kid-friendly binoculars to help students focus their attention when we do catch a glimpse of wildlife.
